# About Medication-Assisted Treatment (MAT)

Medication-assisted treatment involves the use of medications, in combination with counseling and behavioral therapies, for the treatment of substance use disorders. Research shows that when treating certain substance use disorders, a combination of medication and behavioral therapies is regarded as most successful when treating the disorders. Medication-assisted treatment is clinically driven with a focus on individualized patient care.

The Substance Abuse and Mental Health Services Administration (SAMHSA) of the U.S. Department of Health and Human Services certifies Opioid Treatment Programs (OTPs) that provide methadone and buprenorphine to treat individuals addicted to opioids such as heroin, oxycodone, or hydrocodone. Currently, methadone and buprenorphine are the only scheduled opioid medications approved for the treatment of opioid addiction. SAMHSA's Center for Substance Abuse Treatment (CSAT) manages the day-to-day regulatory oversight activities necessary to implement SAMHSA regulations, 42 CFR Part 8, on the use of opioid agonist medications (methadone and buprenorphine) approved by the Food and Drug Administration (FDA) for addiction treatment. These activities include supporting the certification of over 1,200 OTPs that collectively treat over 270,000 patients daily.

CSAT manages the operational requirements of the Drug Addiction Treatment Act of 2000 (DATA 2000), which expands the clinical context of medication-assisted opioid addiction treatment by allowing qualified physicians to dispense or prescribe specifically approved Schedule III, IV, and V narcotic medications for the treatment of opioid addiction in treatment settings other than the traditional opioid treatment program. Currently, the only medications that meet the statutory provisions of DATA 2000 are buprenorphine and buprenorphine in combination with naloxone. Additionally, CSAT supports the training of medical and substance abuse professionals on a variety of treatment issues including the use of methadone and buprenorphine. For additional information visit <http://www.dpt.samhsa.gov/>.

## Methadone

Methadone is a synthetic opioid that blocks the effects of heroin and other prescription drugs containing opioids. Used successfully for more than 40 years in treating opioid addiction, methadone has been shown to eliminate withdrawal symptoms and relieve drug cravings from heroin and prescription opioid medications. Methadone is a medication that prevents opioid withdrawal symptoms for up to 36 hours and must be taken daily. Taken as directed, methadone:

- blocks the euphoric and sedating effects of opioids;
- relieves the craving for opioids that is a major factor in relapse;
- relieves symptoms associated with withdrawal from opioids;
- does not cause euphoria or intoxication itself (with stable dosing), thus allowing a person to work and participate normally in society; and
- is excreted slowly so it can be taken only once a day.

The use of methadone for medication-assisted treatment was developed in the 1960s, and is a form of pharmacotherapy for the treatment of addiction or dependence to opioids, which includes a pharmacologic intervention as part of a comprehensive substance abuse treatment plan, with an ultimate goal of patient recovery with full social function.

Methadone has been demonstrated to reduce mortality, decrease transmission of HIV and other blood-borne illnesses, and improve maternal and fetal outcomes during pregnancy. In light of these well-established benefits, it is important to recognize that there may be side effects of methadone, some of which may be severe and in some cases fatal, including cardiac arrhythmia and the risk of respiratory depression and overdose.

## Buprenorphine

Buprenorphine is a medication used for detoxification and maintenance therapy in the treatment of opioid addiction. It works by blocking withdrawal and craving without producing euphoric effects. It is the only opioid addiction treatment medication that can be prescribed by a physician in an office setting. The brand names Subutex® and Suboxone® are prescription medicines that both contain buprenorphine and treat opioid addiction by preventing symptoms of withdrawal from heroin and other opioids. Subutex® contains only buprenorphine hydrochloride, while Suboxone® contains the additional ingredient naloxone to guard against misuse.

While the safety profile of buprenorphine—a partial opioid agonist—is generally better than full opioid agonists, the risk of central nervous system (CNS) depression still exists and caution must be used, particularly in cases where other CNS depressants are present.

## The Drug Addiction Treatment Act of 2000 (DATA 2000)

This act enables qualifying physicians to receive a waiver from the special registration requirements in the Controlled Substances Act for the provision of medication-assisted opioid therapy. This waiver allows qualifying physicians to practice medication-assisted opioid addiction therapy with Schedule III, IV, or V narcotic medications specifically approved by the FDA. On October 8, 2002, Subutex® (buprenorphine hydrochloride) and Suboxone® tablets (buprenorphine hydrochloride and naloxone hydrochloride) received FDA approval for the treatment of opioid addiction. Subsequently in 2009 and 2010, the FDA approved two generic versions of Subutex®.

To receive a waiver, a physician must notify SAMHSA of his or her intent to begin dispensing or prescribing this treatment. The Notification of Intent must contain information on the physician's qualifying credentials and additional certifications including that the physician has the capacity to refer such addiction therapy patients for appropriate counseling and other non-pharmacologic therapies, and that the physician will not have more than 100 patients on such addiction therapy at any one time. When the waiver is received, the physician may then begin using buprenorphine for the treatment of opioid addiction. For additional information visit <http://buprenorphine.samhsa.gov/>.

## State Opioid Addiction Treatment System Maps

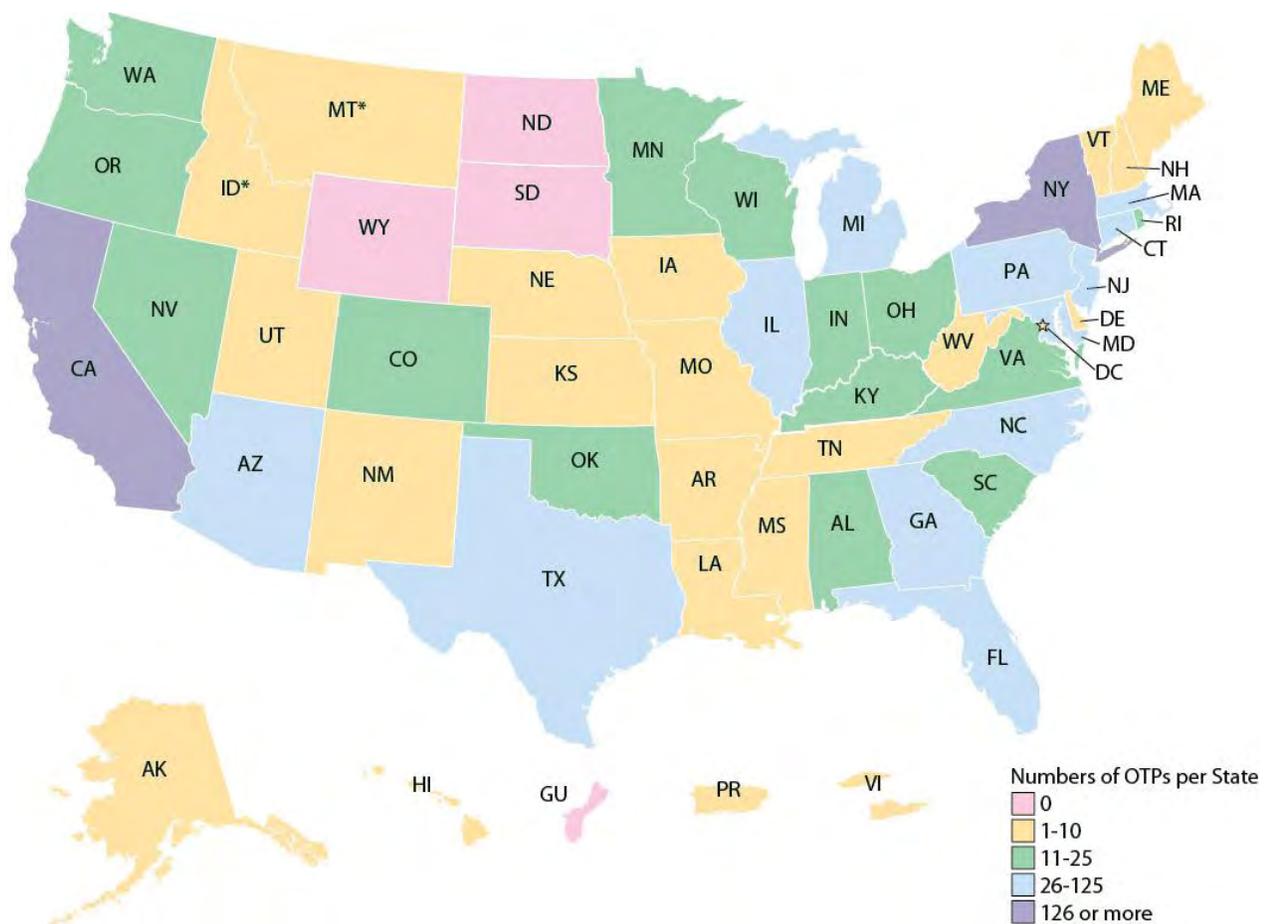

Within this report, two maps are presented for each state: Certified OTPs and DATA Certified Physicians. The maps are intended to provide an overview of locations and were produced using street addresses. Location points on both types of individual state maps may overlap due to multiple sites in close proximity to one another.

A searchable directory of more than 11,000 drug and alcohol treatment programs that shows the location of facilities around the country that treat alcoholism and alcohol and drug abuse problems is available at <http://findtreatment.samhsa.gov>. A physician locator that similarly identifies physicians who are authorized to prescribe buprenorphine is available at [http://buprenorphine.samhsa.gov/bwns\\_locator](http://buprenorphine.samhsa.gov/bwns_locator).

# United States

These two maps present an overview of medication-assisted therapy in the States and territories of the United States. They focus particular attention on SAMHSA certified OTPs that provide medication-assisted therapy to treat individuals addicted to opioids such as heroin, oxycodone, or hydrocodone. The first map shows the States with OTPs, and the second shows the number of patients. New York, California, and Texas have the largest number of OTPs at 152, 146 and 78 respectively.

## Number of Opioid Treatment Programs (March 2010)

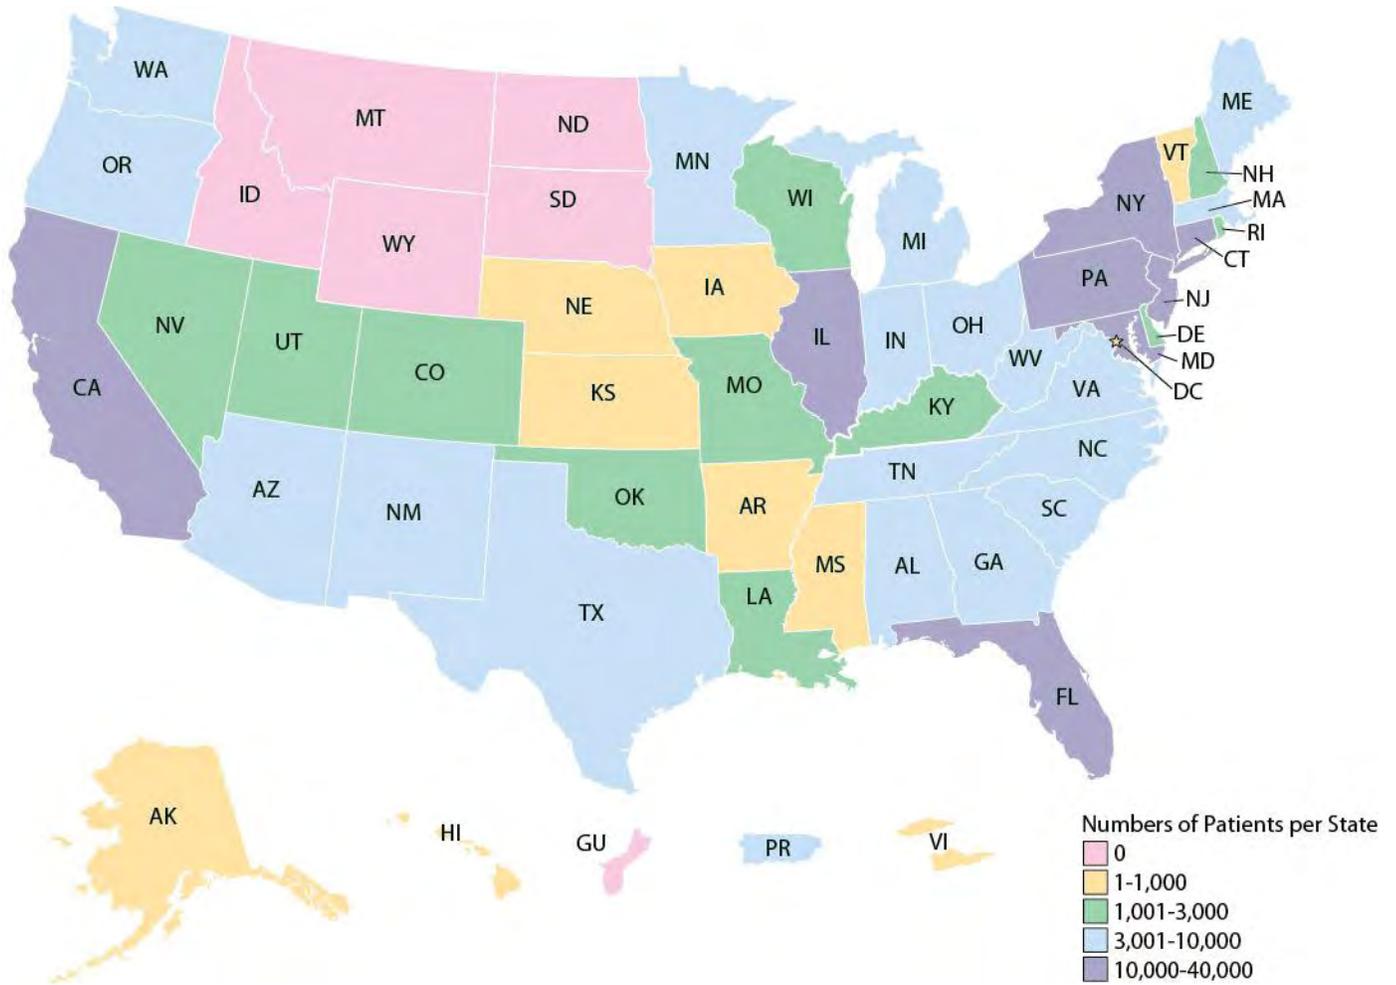

**Total Number of OTPs: 1,216**

Source: SAMHSA, CSAT. OTP Database. March 2010.

\*No data were reported by Idaho and Montana for March 31, 2008.

## Number of Patients (March 31, 2008) in the U.S.

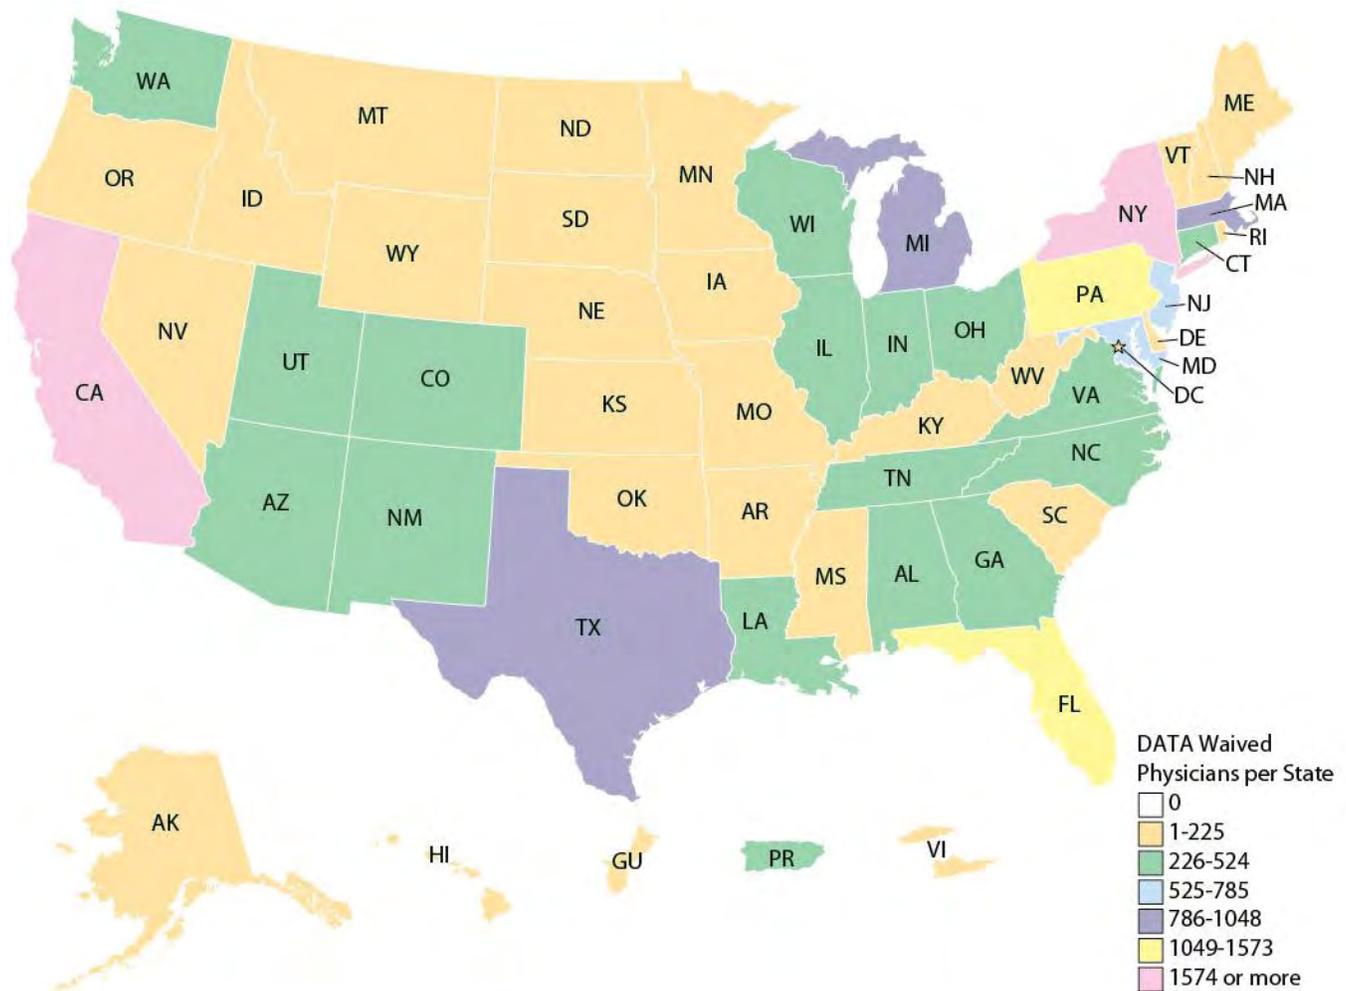

### Total Number of Patients in OTPs: 272,351

Source: SAMHSA, CBHSQ. National Survey of Substance Abuse Treatment Services (N-SSATS). March 31, 2008.

The map below presents the number of physicians who have a waiver to prescribe or dispense buprenorphine and the number of patients in OTPs by State. New York, California, and Pennsylvania have the largest number of physicians who dispense buprenorphine at approximately 2,096, 2,087, and 1,165 respectively. However, New York, California, and Minnesota have the three largest numbers of patients receiving buprenorphine via OTPs.

### Number of DATA Waived Physicians by State (March 2010)

**Total Number of Physicians: 18,842**

Source: SAMHSA, CSAT. OTP Database. March 2010.

**Total Number of Patients Receiving Buprenorphine via OTPs: 4,280**

Source: SAMHSA, CBHSQ. National Survey of Substance Abuse Treatment Services (N-SSATS). March 31, 2008.

# Highlights

SAMHSA's Center for Behavioral Health Statistics and Quality (CBHSQ) conducts the National Survey of Substance Abuse Treatment Services (N-SSATS), an annual census survey of all known facilities in the United States, both public and private, that provide substance abuse treatment. The overall response rate for the 2008 survey was 94.1 percent, and N-SSATS provides point prevalence data. Major highlights from the 2008 N-SSATS, conducted on March 31, 2008, are listed below.

- Of the 13,688 facilities responding to N-SSATS, OTPs certified by SAMHSA were available at 1,132 facilities or 8 percent of all substance abuse treatment facilities and patients receiving methadone or buprenorphine accounted for 24 percent of all patients in treatment.
- Of the 272,351 clients receiving one of the two medications approved for the treatment of opioid addiction, 98 percent received methadone. Of the 15,732 clients receiving buprenorphine, the majority (73 percent) did not receive it from OTPs.
- Between 2004 and 2008, the proportion of clients in all facilities receiving methadone or buprenorphine ranged from 22 percent to 24 percent.
- Most facilities with OTPs offered outpatient treatment (92.2 percent). Outpatient methadone/buprenorphine maintenance was offered in 88.7 percent, regular outpatient treatment in 62 percent, detoxification in 47.4 percent, intensive outpatient treatment in 25.7 percent, and day treatment/partial hospitalization in 8.1 percent of facilities with OTPs.
- Federal government-operated facilities (i.e., Veterans Administration, Tribal government) with OTPs were more likely than facilities of other operational structures to offer more than one type of care. One-hundred percent of the Federal government-operated facilities with OTPs offered outpatient treatment, 50 percent offered hospital inpatient treatment, and 36.1 percent offered residential (non-hospital) treatment. Ninety-four percent offered outpatient methadone/buprenorphine maintenance. Private for-profit facilities with OTPs had the lowest proportions of facilities offering residential (non-hospital) and hospital inpatient treatment at 3.8 percent and 3.2 percent respectively.

The requirement for SAMHSA's approval of OTPs is that they be accredited by an approved accreditation organization. Of the OTPs, 27 percent were accredited by The Joint Commission (formerly known as Joint Commission on Accreditation of Health Care Organization-JCAHO), 66.4 percent by the Commission on Accreditation of Rehabilitation Facilities (CARF), 4.3 percent by the Council on Accreditation (COA), .9 percent by the National Commission on Correctional Health Care (NCCCHC), and 1.4 percent by the State Accreditation Authority.

# Alabama

The July 1, 2009 U.S. Census Bureau population estimate for Alabama was 4,708,708 (1.5 percent of the total U.S. population). On March 31, 2008, according to the SAMHSA, CBHSQ, National Survey of Substance Abuse Treatment Services (N-SSATS), there were 13,939 patients receiving any type of substance abuse treatment in 136 facilities.

## Profile of Opioid Treatment Programs (OTPs)

**Total Ohio  
Certified Opioid  
Treatment  
Programs as of  
March 2010: 16**

The following map shows the location of the Opioids Treatment Programs in Ohio.

Source: SAMHSA, CSAT. OTP Database. March 2010.

Table One shows the types of treatments offered statewide and compares the percentages to the National percentages. Table Two compares the number of Patients in OTPs statewide to those on a national level. Table Three lists the types of payments accepted for all services by OTPs statewide, and compares the percentages to the national percentages. Table Four describes the types of OTP operations statewide, and compares those percentages to those at the national level.

**Table 1: Type of Treatment in OTPs Statewide**

Type of Treatment	State Percent	National Percent
Maintenance only	35.3	31.3
Detoxification only	--	6.6
Both maintenance and detoxification	64.7	62.1

**Table 2: Number of Patients in OTPs**

Number of Patients	State	National
Total	3,231	272,351
Patients receiving methadone	3,167	268,071
Patients receiving buprenorphine	64	4,280

Source: SAMHSA, CBHSQ. National Survey of Substance Abuse Treatment Services (N-SSATS). March 31, 2008.

**Table 3: Type of Payment Accepted for All Services by OTPs**

Type of Payment Accepted	State Percent	National Percent
Cash or self-payment	94.1	95.9
Private health insurance	76.5	48.5
Medicare	41.2	29.4
Medicaid	82.4	62.8
State financed insurance (other than Medicaid)	17.7	32.0
Federal military insurance (e.g., VA, TRICARE)	35.3	17.8
Sliding fee scale (based on income and other factors)	76.5	51.1
No charge for patients who cannot pay	70.6	33.4

Source: SAMHSA, CBHSQ. National Survey of Substance Abuse Treatment Services (N-SSATS). March 31, 2008. Facilities may accept more than one type of payment.

**Table 4: Type of Operation of OTPs**

Type of Operation	State Percent	National Percent
Private non-profit	76.5	38.9
Private for-profit	5.9	49.3
Local, county, or community government	5.9	4.6
State government	--	3.8
Federal government	11.8	3.2
Tribal government	--	0.3

Source: SAMHSA, CBHSQ. National Survey of Substance Abuse Treatment Services (N-SSATS). March 31, 2008.

Table Five lists the types of accreditations present in the state, and compares them percentage wise with the national percentages. Table Six lists the distribution of buprenorphine per 100,000 Population by grams weight statewide, and lists the State's rank on a national scale.

**Table 5: Accreditation of OTPs**

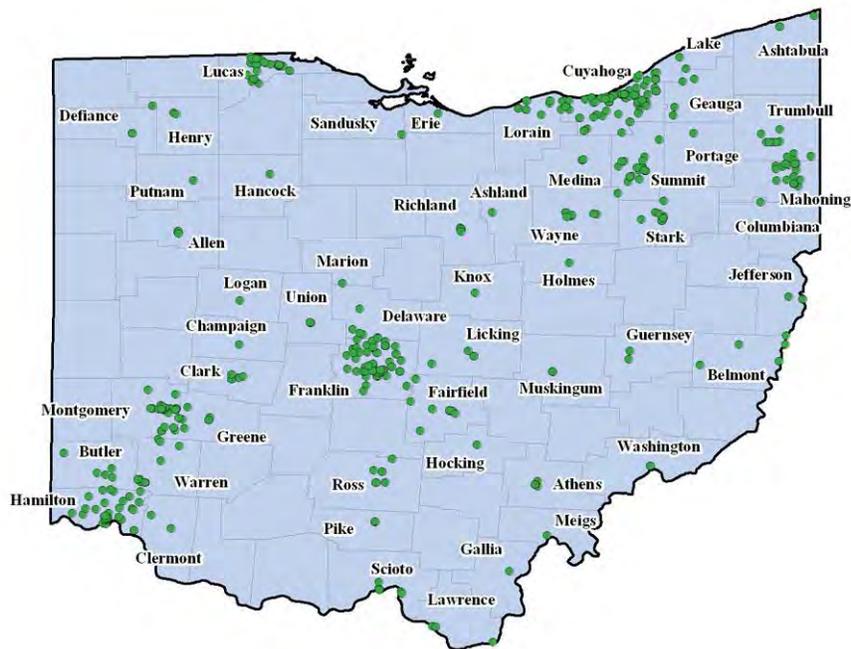

Accreditation	State Percent	National Percent
The Joint Commission	37.5	27.0
CARF (Commission on Accreditation of Rehabilitation Facilities)	62.5	66.4
COA (Council on Accreditation)	--	4.3
NCCHC (National Commission on Correctional Health Care)	--	0.9
State Accreditation Authority	--	1.4
